

## ABOUT

Remain Software, established in 1992, is an independent software vendor delivering innovative solutions that support the entire Application Lifecycle Management, from requirements through design, development up to deployment and testing.

Software Change and Workflow Management solutions offered by Remain Software are robust and deliver added value that customers expect and count on. These in-house developed products help organizations to simplify and automate processes, improve workflows and teamwork and streamline their software development for the IBM i (AS/400, System i), Windows, Unix and Linux. All of these features bring organizations significant profits.

Technology supported by Remain Software solutions: Gravity Task & Workflow Management, IBM Rational Team Concert, X-Analysis, RPG Toolbox, RDi, MIMIX Promoter, Java, PHP, 4GL (LANSA, CA Plex, CA 2E, AS/SET, Magic, IDDOS, EGL, ProGen), and others

Simplified and standardized Application Lifecycle Management, time and money savings, improved teamwork productivity and communication are just one of the benefits which altogether result in high quality applications and customer satisfaction.

Remain Software is an agile customer focused organization, supported by an extensive partner network. More than 20 years' experience and a positive track record allowed Remain Software to become the recognized Application Lifecycle Management (ALM) solutions provider in the world and a market leader in Benelux.
